

Amendments to the Specification

Please amend the paragraph in lines 19-28 on p. 6 of the Specification as follows:

FIGURE 5 also illustrates a cable management apparatus **500** according to one aspect of the present invention. The cable management apparatus **500** allows for flexible routing of cables within the system. The cable management apparatus **500** includes a substrate **502** and at least one cable fastener **504** that are capable of releasable engagement with each other. The cable fastener **504** can be any mechanism that can be made to encircle cables and conform to their width. For instance, the cable fastener could be a ring of plastic, fabric, string, or other malleable material, wherein the ring is of a construction that allows variable diameter sizing. One such embodiment would be an elastic ring coupled to an elongated body. In the preferred embodiment, the cable fastener **504** is a tie wrap as described below in connection with **FIGURE 6**.
